Response to Questions #3
Hinesville/ Ft Stewart WWTP Modification
PCS # 2009-63
December 9, 2014

1. Please clarify the extent of the concrete structures demolition. Is all of the concrete to be demolished and removed or to a certain depth below grade? **Yes all concrete for each structure will be removed.**
2. Please clarify the air pipe sizes inside the Post EQ Basin. Section 3 on M-4 shows 2-8" and 1-6". It appears from M-18 and the location of this section (after single diffuser rack) that this should be either 2-6"(feeding SBR 1 and 4) and 1-8" (Post EQ – North drop) or 3-6". **That is correct.**
3. Please confirm that aeration pipe feeding a single diffuser rack would be 3". For example, the single diffuser rack at each SBR is fed from an 8x3 Tee (in the Post EQ Basin), such that it is 3" through the wall. **That is correct.**
4. Please clarify the Post Eq airline size as it leaves the Blower Building and after the first branch to the South drop noted as 8x6 Tee. Is it 8" to the North drop or 6"? The note near the North drop is "6" Welded SS Air Pipe". **Blower Building to 8"x 6" Tee is 8" pipe. All pipe after the Tee is 6"**
5. Regarding the M/WBE forms contained in Addendum # 1 , the front page of the section states "ALL M/WBE documents to be submitted in separate sealed envelope" ; however, several of the forms are specifically for use with a pay application and for end of project. Please provide a list of M/WBE documents that need to be submitted with the bid.
6. Questions 54 & 64 in *Response to Questions* dated November 10th both state that they have been referred to the MWBE expert and a response would be provided. We have not received a response. Please advise **See Below**
7. Where are the cast in place tactile/detectable warning surface tiles section 09906 required on the project? **At the end of new sidewalks that abut a roadway or commercial drive. All drives within the project are considered commercial drives.**
8. Does the below structure piping and concrete encasement under existing structures get removed completely to the outside of the structure footprint? **Remove only under the structure footprint. Pipes remaining must be plugged with pipe plug and blocked with concrete in accordance with blocking spec.**
9. Are the existing concrete structures to be completely demolished including base slabs and footings? **yes**

10. Is it the intent to plug all existing drain piping shown between the manholes on sheet D-2 except for the two drying bed drain lines and 6" BD from existing headworks? **Demo lines shown to be demoed and plug the rest in accordance with spec.**
11. Furnish the depths of the existing manholes and drain piping designated to be removed on sheet D-2.
12. The box culvert leaving the Existing Chlorine Contact Basin has a top elevation of ~60.50 and the proposed storm water basin has a bottom elevation of EL 56.00 in the area of the culvert. Please confirm the Box Culvert must be demolished along with the CCT and if so to what extent. Also, if demolition is to the Effluent Channel please confirm if repairs to the Effluent channel in that area are required. Effluent channel must be repaired if damaged. **Box culvert under roadway may remain, but must be removed where new drainage ditch crosses.**
13. In reference to question 18 of the first Q&A, since JB A-1 is now established as being new in lieu of existing per plan view, can the structure be changed to be a doghouse type structure to facilitate tie-in.. **If structure has not been ordered by then not can. If the structure is already under construction it must remain as a solid box. Please keep in mind no concrete will be allowed in this box so any holes or closure around pipe would be polymer concrete, no exterior coating will be allowed to seal over concrete as an alternate to polymer concrete. We suggest you plan on a new box not doghouse. .**
14. Regarding Q&A #18 from previously answered questions, if JB A-1 is Owner provided, should it go North or south of the existing JB that is currently shown on the plan view. Would the existing JB remain or be demolished? **Existing box will be demolished**
15. Is there any demolition required of the gas piping at the digester. **See Plans**
16. How and where will the plant personnel conduct lab work, sampling, testing, etc. during the time between demolition of existing lab and installation of new? Will there be a requirement for the contractor to furnish any temporary arrangements? **The lab activity for this plant will be conducted in a temporary trailer on site. All essential lab equipment will be moved to the trailer by the owner. The contractor will be required to complete all lab improvements within a 90 day window. Any extension beyond that time will require the contractor to reimburse the City for rental payments.**
17. Regarding the SBR foundation slab, please clarify if the foundation thickness should be 2'-8" in accordance with typical detail 2 on plan 3S-1 or 3'-0" as indicated on partial sections plans 3S-4 and 5? **Foundations should be in accordance with structural Drawings**
18. Sheet 8S-1 shows a blockout for a Greenheck fan and refers to Mechanical plans for equipment. The Chemical building does not have a mechanical plan. Should

any equipment be provided in this area. **Yes a Greenheck wall fan will be required and supplied by the contractor. Specification will be included in addendum #3.**

19. Sheet C-1 shows a small portion of the paving east of the existing plant to be milled. The entrance road that runs in front of the operations building going north of the secondary clarifiers does not call for milling. Is it the Owner's intent to only mill the existing road as shown and overlay the remaining? **Yes, the intent is to only mill the areas that match existing pavement and that the match is critical to drainage**
20. Regarding Item #9 of the Pre-Bid meeting minutes, will a quantity of solids to be removed by Contractor be provided? **The contractor should be prepared to remove and dispose of 200,000 gallons of sludge form each digester. The contractor will be required to provide his own means of drying the sludge if required for disposal. The drying beds nor the filter press will be available for use by the contractor.**
21. Is this project a Davis-Bacon Project? **No**
22. I am the gentleman who sent some information to you earlier this afternoon about ULTRA-SEAM metal roofing and red iron retro-fit framing. I sincerely hope you will allow our company the opportunity to get our product approved for the roofing for this project as well as the retro-fit framing. In addition to meeting all the roofing specifications in doing ULTRA-SEAM and the retro-fit framing we can also provide decreases in roofing costs and still meet or exceed the roofing specifications. Please let our company know either way what you decide? If you need any additional information from our company on these products, please give us a call? **If he meets the spec he does not have to get approved. Only materials that have some exception to the spec is required to submit for approval.**
23. Are Davis-Bacon wages required for this project? **No**
24. In the response to questions #2, question number 3, the answer says all conduits installed in the floor shall be RGS or IMC. Does this only refer to the conduits in the Power Bldg. and Blower Bldg. slabs? All notes 7 on E0.2 & all notes 7 and 8 on E0.3 show PVC in the slabs. Please clarify **Conduits within the floor slab of the Blower Bldg. and Power House shall be RGS or IMC, conduits in the earth below the slab shall be SCH80 PVC; This is due to the limited thickness of the slab. Conduit installed within the concrete of the SBR tank structure shall be SCH80 PVC, but shall transition to Stainless Steel Conduit before emerging from the concrete. The means and methods are the responsibility of the contractor but must conform to the specifications.**
25. Can Liberty Co., City of Savannah, and neighboring counties be included in the allowable M/WBE Certification list? The provided list shows 3/8 of the listed allowable cities/counties are in the Atlanta area which is almost 4 hours away.

During the pre-bid meeting, the engineer recommended we reach out to M/WBE contractors in the Hinesville area as they may be more likely to bid with us. Please consider increase the list to include nearby agencies (cities & counties). **Yes other surrounding communities can be used.**

26. Section VII *Minority Participation Encouragement Policies* Paragraph A.3 states the city will provide trade specific lists. Please provide. **See attachment**
27. Drawing M-17 shows an Air Handling Unit and duct alongside of what appears to be an exhaust fan for the Blower Building. Drawing 6S-1 shows a 7 1/2 Ton Air Handling Unit placed on a platform in the ceiling of the Blower Building. Drawing E3.0 shows another type of Air Handling Unit in the Ceiling along with Duct, Condensing units and an Exhaust Fan. This Drawing also has detailed notes on this system. Please clarify which system that is to be installed in the blower building and if the General notes located on E3.0 are to be the only specification given for the HVAC system. **The air handler will hang from the ceiling as shown on the electrical drawings.**
28. What is the coating specified for the Reuse Pump Station? **PVC Coating for new wetwells, spectrashield for existing wetwells.**
29. In our understanding that, per specification section 09900, the inside of the digester are to be coated, clarifiers are to remain uncoated, and No coatings for exterior of tanks. Please clarify that this is correct. **Sheet M-8 requires coating of exterior of digesters. Please review more than just the spec.**
30. For the dual containment chemical piping on this project, is a pre-manufactured true dual containment system required, or is the piping to be regular SCH 80 PVC pipe with poly tube run through it? If the intent is to have a pre-manufactured system, two runs of pipe would be required to both the SBRs as well as the digesters. True dual containment pipe is not made that can contain two different runs simultaneously. Please advise. **Separate runs are good.**

**November 2014
Portal List**

Based upon information provided at the time of review, the list of business enterprises provided below have been certified through the City of Savannah as being at least 51% minority or woman owned and controlled. All services listed by each M/WBE are independently identified and provided to the City of Savannah. All firms are encouraged to contact any M/WBE of interest to learn more about its services.
